Customer Conservation Rebate Programs

Truckee Donner Public Utility District is committed to helping its customers sustainably manage their electricity and water use. SB1037 (and its related legislation) creates a funding pathway to allow TDPUD to develop and promote energy conservation through educational events, programs supporting income-qualified customers, and direct incentives. TDPUD has programs in place for both our residential and commercial customer bases designed to balance traditional conservation with more current decarbonization efforts. These programs' activities are aggregated following each calendar year, and the results are reported to the California Energy Commission. These reports can be found on TDPUD's website. Programs are subject to strict cost-effectiveness assessment to ensure that they are a net benefit to both TDPUD customers and the larger community.
